Preface and acknowledgements

As this bibliography shows, there is considerable research interest in the topic of proving the correctness of computer programs. Included in the bibliography are all published or unpublished papers, books, reports, theses, etc., known to me that are at all related to the topic. Material cited encompasses very abstract papers dealing with the transformation and equivalence of program schemata; proposals and methods for proving individual programs correct; papers proving the correctness of specific algorithms and programs; and work that has proofs as an incidental part of the paper. In other words, the range is from the very abstract to the very practical. An item is included unless it appeared obvious to me that it did not belong. Thus material of marginal relevance is included.

A complete citation was impossible to obtain for a few items. The best available information is given. An item is in the same language as that of the title, unless otherwise indicated at the end of a citation. Note that the contents of the Russian publication *Problem Kibernetiki* appears in English translation as *Problems of Cybernetics*; similarly *Kibernetika* appears as *Cybernetics*. I would be most interested in learning of corrections and additional citations to update the bibliography.

This work was supported by the National Science Foundation under Grant GP-7069 and the Mathematics Research Center, United States Army, under Contract Number DA-31-124-ARO-D-462. The contributions of D. C. Cooper, J. W. de Bakker, D. I. Good, L. Green, Z. Manna, R. Milner, C. M. I. Rattray, C. S. Wells and D. Wood to compiling the bibliography are acknowledged without in any way holding them responsible for what has been included, excluded or omitted.
