

# SUBJECT AND NAME INDEX

[Page numbers are in roman type, chapter numbers in italics. Names only appear which are in no sense bibliographic references; otherwise they are to be found in the author index.]

- A\* search algorithm, 60-1
- ABSET language, 209
- ABSYS language, 269
- accommodation, in Piagetian psychology, 378-80, 383, 388
- ACT system, 322
- actors, 426-7
- addlists, add-delete lists, 120-2, 130-3
- admissibility, in heuristic search, 60-1, 67-8
- advice, 151, 157-68, 176, 219
- advice theory, 8
- advising, 237, 239, 260, 262, 264
- agitation, in a chess position, 143
- Alexander, C. H. O'D., 149
- ALGOL language,
  - ALGOL 60, 269, 279-82, 442
  - ALGOL 68, 226
  - ALGOL-like, 148, 229, 254, 271, 286-7, 306, 316-8, 323
  - list-processing and other extensions, 278-83
- ambiguity
  - in chromosome classification, 455
  - in language text, 541, 545, 577-9, 586, 590
  - in scene analysis, 484-5, 493
- Amsterdam (Vrije Universiteit), 55
- Andelfingen cemetery, 438, 447-8, 450-1
- Anderson, B., 404
- antecedent theorems (in PLANNER-like systems), 104, 533-4
- AP/1 language, 122
- APL language, 225-6
- AQUAL/1 system, 175, 177-8, 184
- archaeology, 21
- Artificial Intelligence (AI),
  - and cognitive psychology, 329
  - at human level, 172
  - languages, 105-121, 209-12, 266
  - lectures by Winograd, 241
  - Minsky's view, 535
  - and problem of relevance, 512
  - programs, 210, 221, 306-7, 321, 445
  - researchers, 7, 56, 148, 231, 243
  - in teaching, 7, 18, 19, 20
- assignment in programming, 106-7, 125, 230, 256, 259, 337
- Awerbach, J., 168
- axioms,
  - field axioms, 44
  - frame axioms, 120, 133, 211
  - in geometry, 11, 18-27
  - in resolution theorem-proving, 73-4, 269-72
  - in probability theory, 139-48
- backtracking,
  - in computer chess, 142-3
  - in PLANNER-based systems, 122, 220, 549
  - in PROLOG, 271
  - in scene-analysis, 526, 532, 534
  - in standard search methods, 70
- backward chaining, backchaining,
  - in geometrical proof, 18, 21, 25
  - in production systems, 319
  - in program validation, 37, 40, 51
- BASIC language, 226
- Bayesian statistics, 147, 472
- beliefs, 140-1, 617
- Bennett, C., 393
- binding of names to values, 13, 230, 314, 561
- blocks program, blocks world, 95-8, 113, 211, 579
- Blomme, R., 393
- branch-and-bound method, 60, 68, 366
- British Columbia, University of, 510
- British Museum algorithm, 73
- Büchi, cited by D. E. Knuth, 152
- bugs,
  - in programs, 132
  - in production systems, 327
  - as sources of insight, 510
  - in teaching, 385
- California, University of (at Santa Cruz), 8, 55, 73, 86, 475, 493
- Caratheodory's Theorem, 500
- Castagnola (Institute for Semantic and Cognitive Studies), 541
- causal chain, 614, 616-7
- causality, 597-606
- cemetery sites, 21
- centromeric index, 455, 457, 467, 470
- chess
  - complexity, 57, 153-67

SUBJECT AND NAME INDEX

- computer chess, 7, 366-7
- end-games, 10, 11, 69, 149, 159
- puzzles, 91-2
- Chomsky, 267
- chromosomes, 22
- Clowes, M. B., 7
- cluster analysis, 440, 451
- cognitive dissonance, 383
- Colmeraner, A., 283, 292
- combinatorial explosion,
  - in archaeological inference, 445
  - in heuristic search, 146
  - in problem-solving, 69, 92
  - in real-world inference, 544, 549-50
  - in theorem-proving, 37, 74
- COMIT language, 217
- complexity,
  - of chess, 57, 153-67
  - of control structures, 321
  - of genetic structures, 206
  - non-polynomial (NP), 55-57, 66, 70
  - of problem-domains, 6-2-8, 155, 166, 271-2, 308, 329
  - of programs, 224, 243, 317
  - of proofs, 73, 79, 83-4
  - of propositions, 171-2
  - theory, 58, 70, 152
- computer-aided instruction, 7, 81-20
- computer vision, 7, 23-25
- computers,
  - CDC 6600, 45
  - Cyber 73-2, 390
  - IBM 704, 19
  - PDP 6/10, 596
  - PDP-10, 45
  - PDP-11/35, 158
- Conceptual Dependency, 27
- conceptual structures, 576-7, 580-1
- Conniver, 122, 126, 209, 217, 220-1, 296
- consequent theorems (in PLANNER-like systems), 104, 325-6, 556
- contexts,
  - in AI languages, 105, 122-4, 129-34, 211-13, 217, 220
  - in production systems, 315-6, 319
  - in story-understanding, 572
- control structures,
  - in AI languages, 210, 212, 220-1, 237
  - in production systems, 302, 306, 314-22, 327, 329
- convex hull (of a set), 500
- COPY DEMO system, 510, 535
- cost-benefit of computations, 160, 164
- costs,
  - of analysis in chess, 141-5
  - of computation, 59, 66, 147, 464, 470
  - of paths and tours, 56, 59, 67
  - of trees, 67-8
- courseware, 387-90, 400-4, 409
- cracks (in scene analysis), 531-2
- crossing numbers (in image analysis), 461-4
- cut-sets (in scene analysis), 482-3, 24
- database management, 261-2, 549
- data-driven programs and procedures, 231-62, 317, 446
- de-bugging,
  - as analogy for learning, 368, 385
  - of frame implementations, 567
  - of LISP programs, 225
  - by machine, 336, 358
  - of problem-solvers, 132
  - of program-synthesis rules, 336
- deletelists, 120-2, 130-3
- demons,
  - in AI languages, 218, 236
  - in language understanding, 551-59, 572-4, 617
  - in production systems, 309
  - in archaeological inference, 437, 447-52
- DENDRAL system, 303, 306, 309-11, 315-6, 322-5, 445
- Dennis, J. R., 398-9
- diagrams,
  - in geometrical proofs, 1
  - in program synthesis, 338-41
- difficulty of problems, 68, 166-7
- Dijkstra, E. W., 281
- dual, duality (in scene analysis), 23
- dynamic weighting (in heuristic search), 55, 68-9
- Edinburgh,
  - University of, 151
  - Western General Hospital, 455
- efficiency,
  - of computations, 7, 278, 303
  - of control structures, 70, 318
  - of learning, 364
  - of matching, 322
  - of plans, 117
  - of program constructions, 219
  - of programs, 279, 357, 444-5
  - of search algorithms, 55-62, 210
  - of world-modelling, 125-9, 133
- end-games in chess, 10, 11, 69, 149, 159
- entropy (use in pruning search), 145
- EPL language, 230
- equality, 30-1, 34, 280
- error,
  - in function-evaluation, 167
  - in heuristic search, 3
  - in student performance, 384
- Essex, University of, 433
- evaluation functions,
  - in game-playing, 7, 12
  - in heuristic search, 62-3, 66
- evidence, 142, 9
- existential quantification, 25, 105, 219
- factor analysis, 433, 451
- formal systems, formalisms, formalizations,
  - actor formalism, 130
  - of knowledge, 159, 164
  - in linguistics, 267, 290, 292
  - in mathematical reasoning, 11, 25
  - using predicate logic, 130

- of probability, 139
- in production systems, 306, 311, 318
- in puzzle-representation, 5
- Sacerdoti formalism, 132
- STRIPS formalism, 125
- FORTRAN language, 228, 277
- frame axioms, frame problem,
  - in Merlin, 70
  - in program synthesis, 100
  - in resolution-based problem-solvers, 120, 124-5, 128, 133, 211
  - in relation to QLISP, 218
- frames (for knowledge-representation), 445-7, 517, 560-74
  
- game theory, game-theoretical, 141, 153-4, 157
- Gaussian sphere, 487, 491
- General Problem Solver (GPS), 120, 133, 210
- goal-protection in problem-solving, 95-118
- goals and sub-goals,
  - in archaeological interpretation, 442
  - in chess, 146-7, 193
  - in complex programs, 224, 266
  - in geometrical proof, 14-18
  - in heuristic search, 59, 210-11
  - in PLANNER, 219-20
  - in problem-solving and program synthesis, 6
  - in program validation, 26, 31, 34-7, 40
- Graph Traverser (GT) program, 60, 66
- Green, C.C., 270
  
- HACKER problem-solver, 117, 423
- Hallstatt cemetery, 435, 451
- Hamilton path problem, 55, 57
- "handles" in programs, 251, 257, 262
- hash-coding, 241
- HBASE system, 122
- HEARSAY II system, 445-6
- Held-Karp bounding function, 55
- Herbrand base, interpretation, universe, 273-5
- heuristic functions, 58, 62, 65-68
- Heuristic Path Algorithm (HPA), 3
- heuristics,
  - in advice theory, 160
  - for forgetting, 618
  - in geometrical proofs, 26
  - to guide search, 3
  - in problem-solving, 141
  - in production systems, 324, 326
  - in scene analysis, 519, 521, 528
- Hilbert, D., 11
- Hoare, C.A.R., 157
- Horwood, E., 8
- Huffman, D., 7-8
  
- Illinois, University of (at Urbana-Champaign), 175, 193, 363, 369, 387, 390
  
- implementation,
  - of the Geometry Machine, 19, 25-6
  - of learning in chess, 176
  - of a problem-solver, 115, 118, 120
  - of production systems, 301
  - of skeleton models, 129
- impossible objects (in scene analysis), 493, 527, 533
- induction,
  - mathematical, 61, 69
  - scientific, 148, 171
  - inductive inference, 9-12
- inequalities,
  - in probability judgments, 140-147
  - in program validation, 2
- inserts
  - in production systems, 317
  - in programs, 237-240, 263
- instantiation,
  - in an actor system, 427
  - in frame systems, 561-2, 569-72
  - in geometrical proofs, 15-16, 19, 27-8
  - in program synthesis, 97
  - in resolution theorem-proving, 76
- INTERLISP system, 230, 236, 245
- interpretations,
  - in archaeology, 21
  - in geometry, 11, 27
  - in language processing, 26-7
  - of line drawings, 525-34
  - in logic, 21
  - procedural, of logic, 283, 285
- interpreter,
  - for ALGOL, 280, 283
  - for LISP, 262, 325
  - for PLANNER, 551
  - for predicate logic, 7
  - for production rules, 301, 304, 312, 326
  - for PROLOG, 271
  
- karyotypes, karyotyping, 22
- Kester, T., 8
- Kleene, S. C., 267
- knowledge
  - acquisition, (by humans), 329, 18-20; (by machines), 7, 132, 162, 9-12, 328, see also under learning systems;
  - base, 31, 162, 300, 329, 335
  - engineering, 148
  - measurement, 7, 7-8
  - about programming, 17
  - representation, see Table of Contents
  - sources, 445-7
  - transfer, 7, 17-20
  - about the world, 26-7
- Knuth, D. E., 167
- Kowalski, R. A., 7, 269, 283
- KRL language, 451
  
- Lasker, Emanuel, 149
- la Tène culture, 437-8, 447
- LEAP language, 209, 213-5

SUBJECT AND NAME INDEX

- learning systems, 132, 146, 158-9, 166, 312, 327-9  
 Lighthill, J., 147, 172-3  
 Linköping University, 223  
 LISP language,  
   in conceptual programming, 223-30, 234  
   234-7, 243-4, 256, 260-2  
   for fact retrieval, 548, 567  
   in relation to production systems, 303,  
   322-6  
   as target of program synthesis, 343, 353,  
   356-7  
 LOGO language, 422-5, 428-9  
 LUSH system (for resolution logic), 271,  
   283-5, 288, 291-8
- McDonald, D., 225, 233, 243, 251  
 machine intelligence research, 147, 151, 156,  
   167, 171-2  
*Machine Intelligence* series, 7-8  
 machine specification (in advice theory),  
   152, 162  
 MACLISP language, 233  
 Malvern (Royal Radar Establishment), 209  
 MARGIE program, 575, 595-7  
 Marina Del Rey (Information Sciences  
   Institute), 45  
 Marseilles, University of, 271  
 Martingale property, 144  
 mass spectrometry, 306  
 Massachusetts Institute of Technology  
   (MIT), 225, 233, 422  
 mathematics,  
   mechanization of, 7, 1, 2  
   teaching, 18, 19, 424  
   strategies in, 11, 69, 74, 140-1, 148  
 medicine, 306-7, 325  
 memo-functions, 277  
 MERLIN system, 70  
 Meyer, A., and Stockmeyer, L., cited by  
   D. Knuth, 152  
 Michie, D., 146, 148-9, 172, 206  
 MICROPLANNER language, 296, 552-3,  
   556-7  
 mini-procedures, 369-77, 384-5  
 Minsky, M., 383  
 models,  
   in archaeology, 452-3  
   in chess, 11  
   in geometry, 22, 26-8  
   in logic, 21, 24  
   in problem-solving, 58, 97, 101-21,  
   124-34  
   psychological models, 302, 323, 544-5  
   object models (in scene analysis), 511-13,  
   517, 535  
   world models (in natural language), 602;  
   (in programming languages) 212  
 monotone property (in heuristic search), 55,  
   61-2, 67  
 multiplication of advantage (in chess), 144  
 multivariate analysis, 440-1, 451-2  
 Münsingen cemetery, 438, 440-2, 447, 451
- MYCIN system, 171, 303, 306, 316-18,  
   323-7, 330, 445  
 Nebringen cemetery, 447-8, 451
- occlusion (in scene analysis), 510-11, 527,  
   529, 532, 534  
 operators (in problem-solving), 120-21, 128,  
   130, 133  
 oracles (in worst-case analysis) 62-5
- Page, D., 374, 384-5, 388  
 Papert, S., 383, 423  
 PASCAL language, 225-6  
 pattern-directed invocation,  
   in an actor system, 426  
   in problem-solving, 97  
   for controlling demons, 450  
   for data-driven calls and advising, 236-7  
   in PLANNER-like systems, 281, 549,  
   551, 559  
 pattern-matching,  
   in an actor system, 426  
   in relation to binding mechanisms,  
   212-221  
   in PLANNER-like systems, 281, 450,  
   549, 553, 556  
   in predicate-logic programming, 280-1,  
   287,  
   in production systems, 313-14, 322-3,  
   325  
 pattern recognition, 455, 517  
 patterns (in chess), 184, 203  
 "Peanuts" characters, 428  
 perceptions, 365-7  
 permutations,  
   in path problems, 56  
   in sorting problems, 96, 271, 276, 278,  
   288-90, 338-9, 345  
   in space-filling problems, 87, 92  
 perspective (in scene analysis), 513  
 Piagetian psychology, 363, 378, 388, 409  
 Plaisted, David, 152  
 PLANNER language,  
   for artificial intelligence, 209, 217-220,  
   281  
   in relation to demons, 450  
   for fact-retrieval, 548-51, 557, 559-60  
   in relation to production-rule selection,  
   325-6  
   for representing mathematical knowledge,  
   25  
 PLANNER-like systems,  
   in relation to heuristic search, 70  
   in relation to resolution logic, 295  
 planning, 6, 609-13  
 PLASMA language, 451  
 PLATO system (for computer-aided  
   instruction), 363, 19  
 PL/I language, 225-6, 267-9  
 Polin, G., 401  
 POLY program (for scene analysis), 534  
 Polya, G., 148  
 polyhedra (in scene analysis), 23, 24, 25

- POPLER language, 209  
 pragmatics for resolution logic, 274-5, 283  
 predicate calculus,  
   in a database system, 232, 235  
   as basis for problem-solvers, 130, 211, 218  
   as a programming language, 7, 15  
   for representing knowledge, 308, 445, 543, 547-51, 559  
   theorem-proving, 19-21,  
     see also resolution.

 SEE program (for scene analysis), 517-527  
 segmentation,  
   in image analysis, 456-7, 460-1, 472  
   in scene analysis, 510, 517, 520, 523, 528-9  
 semantic networks, 445  
 semantics,  
   conceptual semantics, 605-6  
   in geometrical proof, 21-3, 26, 28-9  
   of natural language, 7, 235, 575, 584  
   in production rules, 318, 327  
   of programming languages, 336  
   of programs, 246  
   of resolution logic, 266, 273-4, 283  
   of the Travelling Salesman problem, 56  
 shadows (in scene analysis), 488-9, 531, 534  
 SHRDLU program (for language understanding), 549  
 Sickel, S., 8  
 side-effects, 118, 128, 219, 311, 320, 327  
 SIMULA 67 language, 225, 231  
 SIR program (for fact retrieval), 548  
 Skinner, B. F., 363-4  
 skolem constants, skolem variables, skolemization, 31, 41, 44, 47-8  
 Smith, S. G., 397  
 SNOBOL language, 217, 225  
 SOLCEM program (for archaeological interpretation), 21  
 Solomonoff, R.J., cited by G. Chaitin, 166  
 sorting,  
   problem, 96, 109, 116, 119, 121, 156-7  
   programs, 15, 17  
   theorist, 58  
 Stanford Research Institute (SRI), 94  
 Stanford University, 300, 335, 595  
 Sternberg memory scanning tasks, 305  
 strategies  
   adversary strategy, 62, see also oracle  
   in mathematics, 11, 69, 74, 140-1, 148  
   in PLATO games, 406-9
- QA4 language, 122, 209, 220  
 QLISP language, 94, 122, 127, 209, 218, 221  
 Quicksort, 157, 271, 279, 288, 295  
 quiescence (of chess positions), 143

SUBJECT AND NAME INDEX

- in problem-solving, 6, 220, 324
- in production systems, 327
- in teaching, 384, 402
- in theorem-proving, 7, 18, 26, 58, 4
- STRIPS problem-solver, 6-2, 272
- STUDENT program (for question-answering), 321
- subgoals, see under goals
- super-procedures, 375, 377, 385
- surprisals (in advice theory), 163-4
- Suzman, P., 171, 172
- syntax,
  - conceptual syntax, 605-6
  - in geometrical proof, 11, 22-9
  - in natural language, 575
  - in picture processing, 525
  - for predicate logic, 272-3, 283
  - of production systems, 315, 322, 328
  - of programs, 246
  - syntactic strategies in theorem-proving, 73
  
- Tenczor, P., 391-2
- Texas, University of (at Austin), 30, 45
- theorem-proving by machine, 1, 2, 4, 15
- thresholds, thresholding (in image analysis), 458, 461, 466, 472
- topology (in scene analysis), 512-3, 517, 519-20
- "trans" concept (in language understanding), 576-8
- Travelling salesman problem (TSP), 55-6, 66 66-9
- turbulence (of chess positions), 143
- Turing, A. M., 218-19, 328
- Turing machines, 267, 301
- Turnbull, A., 8
- TUTOR language, 391
  
- types and typing, 2, 220, 230, 233, 244-54, 279
  
- ultraintelligent machine (UIM), 173
- understanding
  - natural language, 272, 426, 26-27
  - program text, 223-4, 315, 335, 17
  - speech, 445
- unification,
  - in pattern-directed invocation, 217, 219, 221
  - in theorem-proving, 44, 48, 75-6, 272
- universal quantification, 19-20, 31, 274
- utilities, 140-147, 164
- utility index (in games), 203
  
- Virginia Polytechnic Institute and State University, 139, 171, 205
  
- Waltz, D. L., 7
- WARPLAN problem-solver, 121
- Waterloo, University of, 266
- weird list, 617, 618
- Western Ontario, University of, 11
- Winograd, T., 549
- Wittgenstein, L., 139
- Woods, W., 7
- world,
  - hypothetical worlds, 6-2-7, 134
  - states of the world, 31, 101, 130, 133
- worst-case analysis, 55, 62-5
  
- Yale University, 575
